

AE039 – Safe procedure for storing used batteries

When purchasing Active Edge tools or replacement battery packs (AE-BPK02) from RIGIBORE, the batteries will arrive in a package. The package will consist of two new battery packs, two new O-rings and two replacement screws.

When replacing the batteries, the container that the new batteries were shipped in can be used to store old batteries.

This not only cuts down on waste, but also makes the used batteries easier to handle. In the cubed containers, they are easily stacked in to a box.

An alternate means for safe storage is to insulate the terminals. This can be done by placing electrical tape over the battery, covering the exposed terminals.
